SEDC/Green View Technologies, LLC.
(GRANT # 10-217- CDED)

Certifying Officer: Edmund Jansen, Chairman, Board of Selectmen

Program Summary:

Green View Technologies, LLC is the first used oil recycling facility in the Northeastern US. They process used oil back into base oil which will be sold to lube oil blenders/distributors. The quality will be comparable to virgin oil while costing much less to produce. Two by-products will be produced, an industrial fuel equal to a #2 fuel oil and an asphalt product.

This facility will create 25 new jobs including operators, technicians, support staff and truck drivers.

The facility will reduce air emissions over the present practice of burning used oil for heat. The project is the purchase of a clay filtration unit. This unit will be added into the processing pipeline. It is the state of the art, super high efficiency pollutant remover.
